WHAT IS AUTOMATED COMPONENT COLLECTION?

Did you know that most whole blood doesn't stay whole for long?

When you give whole blood, your donation is sent to our lab where it is separated into its component parts —Platelets, Plasma and Red Blood Cells. Each component has a unique function that makes it appropriate in the treatment of different diseases, injuries and surgeries.

Red Blood Cells

- Carry oxygen from the lungs to the tissues, and carbon dioxide from the tissues to the lungs
- Are continuously produced and broken down
- Live for approximately 120 days in the circulatory system and are eventually removed by the spleen
- Can be stored up to 42 days

Platelets

- Are critical to the clotting process and help control bleeding by sticking to the lining of your blood vessels
- Live for 7-14 days in the body
- Outside the body, platelets can be stored for only 5 days
- Like red cells, platelets are eventually removed by the spleen

Plasma

- The liquid portion of the blood consists of 90% water, blood cells, proteins and other substances
- Accounts for about 55% of blood volume
- Plasma has many functions including:
 - Maintaining proper blood pressure
 - Supplying critical proteins
 - An exchange system for vital minerals

- Once collected, plasma is frozen to preserve the clotting factors and can be stored up to one year

So what's this Trima thing we keep talking about?

The Trima is a device that allows our staff to, based on current need and donor profile, determine what components should be collected from each donor. With this technology you can contribute any of the three components in nearly any combination ensuring that we make the most efficient use of your donation.

The technology inside the Trima machine uses a centrifuge to separate whole blood into components while you are 'in the chair' and return the unneeded components.

Procedure/Condition	Typical Blood Usage
Accident victim	4-40 units of red blood cells
Aneurysm	6 units of red cells, 4 units of plasma
Cancer treatment	20-30 platelet units during chemotherapy
Heart transplant	1-4 units of red cells
Kidney dialysis	2-4 units of red cells monthly
Knee replacement surgery	2 units of red cells
Liver transplant	20 units of red cells, platelets, plasma
Prostate cancer	2 units of red cells

Administrator's View

Rules, Regulations and Change

Many donors who have been coming to the donor center are seeing new faces at the registration area. The blood bank is in the process of training all donor services staff on computer donor registration because in June, NCCBB began registering all donors live on our computer system now even on the bloodmobiles. We will be using wireless technology and believe that most bloodmobiles will be able to register donors live. As technology changes, we are trying to keep up and make the donation process as convenient and easy for blood donors as we can. The new procedures will also help us comply with numerous regulations related to the donor registration process.

As all of you are aware, regulations have required we ask for donor identification as well. The bad news is the regulators will soon be requiring not just identification, but picture identification for all donors, even those of you who have given gallons of blood. We have not determined what our process will be for this but there will be some flexibility in how we do it. We will be looking at programs where we can take the picture and keep it on file or perhaps have your picture on the donor card we provide you. We regret the inconvenience, but there is no getting around the regulations.

Another change may involve our donor recognition program. We are in the process of upgrading our computer system and our system calculates donation recognitions in increments of gallons rather than every 10 donations as we currently track them. This could mean we change the honor roll board to reflect gallon gallons rather than the current method. I don't think it will be a significant change but watch for that sometime next year.

You may have noticed some minor construction at the blood center. We have moved some functions back into the old blood center which is at 2520 Harrison, the small building on Harrison that is adjacent to ours. The blood center has continued to grow and has outgrown the space here at the 2524 building. The Board of Directors has been evaluating numerous options including moving but for now we have stayed in place on the property owned by the blood center.

We have moved the business office, donor recruitment, and information services to the old 2520 building. The movement of these departments has permitted us to create some training and conference rooms and increase the blood product distribution area. We also installed a walk in refrigerator and are in process of adding a walk in freezer.

Another improvement will be the addition of seamless floors, which is a new regulatory requirement. We are considering all new donor chairs in the donor room and will be updating our temperature monitoring system for all blood products. All of the changes and additions are designed to provide the safest possible blood supply, to keep us in compliance with regulations, and to provide good service to you, the blood donor.

You may sometimes hear us comment or express concern about all of the regulations we are required to follow. We are well aware not all of them are convenient. The comments come because not all regulations are based on a true scientific rationale and in my opinion, not all of them do very much to make the blood supply safer. However, no matter what we think of a regulation, we must comply. And, we need to try to remember the intent is to provide a safer blood product to patients.

Our community blood bank continues to lead the nation in donor support. Humboldt and Del Norte county blood donors give more often than any other community and also a higher percentage of our community are blood donors than any other community. We have communicated with you for years the fact the safest and most cost effective blood supply for our community's hospital patients, comes from the blood of regular repeat donors. I thank all of you for making that safe blood supply available to the patients we serve.

Have a safe summer.

Tom Schallert

"Thank you" is not enough

by Dessie Baxter

For the past nine years I have worked on our yearly newsletter. Every year I thank all of the donors who gave the precious gift of life over the last year. This year the thank you is very personal. On September 9th my husband Ryan and I welcomed the arrival of our third child Arin Rose. She was delivered by emergency C-section and immediately she was in trouble. Arin was having a difficult time breathing. She was immediately taken in to the nursery to be monitored. She was rapidly getting worse and soon she was intubated. During this time, I was in my room recovering from my surgery. Ryan and I were discussing names for our new baby when I started to feel funny. The next thing I knew I had nine strangers standing around my bed working vigorously to save my life. I had started to hemorrhage. An hour and a half later they got my bleeding under control with the help of two units of blood.

Dessie and Arin Baxter

During this time Arin continued to struggle. Even with the machines helping her to breath she was rapidly deteriorating. She needed to be flown to UCSF Medical Center where she could receive more advanced care. Within hours of her arrival in San Francisco Arin also needed a blood transfusion to save her. I could not believe that we both needed blood transfusions to save our lives, just hours apart from each other.

Arin had a rough two weeks in the NICU at UCSF, but she is a strong little girl. Thank you is not enough to say to the donors who saved my life and the life of my baby. When Arin takes her first steps, says her first words and when she grows up and has a family of her own I will still be saying thank you to the "Angels" who saved our lives. It is because of you, the donors, that we will be able to celebrate all these milestones and many more. When you come in to donate next time I would love to show you the latest pictures.

Bruce Stephen's 200th ABC Donation

Bruce Stephens first donated whole blood at a PG&E sponsored mobile drive in 1987. Since then he has become a regular Automated Collection (Trima) Donor who schedules 2-3 appointments ahead while he is "in the chair".

Bruce is now at over 260 Donations!

The Bee is an O!

Tiffany gets ready to draw the Hometown Buffet Bee.

The Bee is a regular donor who often arrives with cookies!

Our Wonderful Blood Drive Sponsors

We would like to thank all of the Humboldt and Del Norte County Businesses, Schools, Fire Departments and other groups who have recognized the value of sponsoring blood drives in our community.

In 2005, 71% of our Whole Blood donations came from our mobile blood drives. Studies show that the greatest barriers to first time donors are inconvenience and lack of time. By visiting donors at their place of work, we greatly increase the chances that a first time donor will "give it a try".

2005 Collections

Well, 2005 was another great year for donations. We had fewer first-time donors in 2005 than in 2004 so we will be increasing our efforts to recruit new donors and take some of the pressure off of our regular donors.

Year	Whole Blood	Automated Collection	Total	New Donors	Annual increase
2001	11,263	1,282	12,545	2,843	
2002	11,490	2,026	13,516	2,865	+7.7%
2003	11,966	2,231	14,197	2,757	+5%
2004	12,599	2,608	15,207	3,760	+7.1%
2005	12,650	3,739	16,389	3,038	+7.7%
